Agenda

01 Smart Context: the idea

02 Architecture & Prompt Engineering

03 Chat API Capabilities & How It Works

04 Limitations, Licensing & tricks

05 Demo: Smart Context in action!

06 Takeaways

Smart Context

The Sample

- WHAT** SPFx Application Customizer that adds a floating side panel to any SharePoint page
- HOW** Calls the Chat API with the current page URL as context and asks Copilot to analyze it
- RESULT** Personalized insights based on YOUR emails, chats, meetings, and files
- BUILT WITH** GitHub Copilot using a AI Assisted dev approach reviewed and refined for quality
- AVAILABLE** Official PnP SPFx Extensions repository

Architecture Overview

Key Insight: Prompt Engineering for Structured Output

By carefully crafting the prompt to require a specific JSON schema, you can build a predictable UI on top of unpredictable AI capabilities. The prompt instructs Copilot to return structured data instead of free-form text.

Prompt Engineering for Structured Output

The "Magic" Behind Smart Context

JSON Schema in Prompt

The prompt instructs Copilot to return data in a specific JSON schema — not free-form text

Predictable Responses

Structured output makes AI responses parseable and renderable into polished UI components

Section-Based Interface

Each JSON field maps to a section in the panel: My Role, Actions, TLDR, Decisions, etc.

Experimental Approach

Instructing Copilot to return raw JSON may not be optimal: **community feedback welcome!**

What is the Chat API?

The Microsoft 365 Copilot Chat API allows you to programmatically engage in multi-turn conversations with Microsoft 365 Copilot.

Enterprise Grounding

Searches your organization's M365 content

Web Grounding

Optionally searches the web for context

Beta Endpoint

Available under /beta — Preview status

Same AI Power

Identical capabilities powering M365 Copilot

Why Use the Chat API?

Control + Integration

Declarative Agents

- Standalone experiences within the Copilot ecosystem
- Great for extending Copilot without much code
- Limited UX control

Chat API

- **Embed Copilot in YOUR apps**
- Full control over UX and architecture
- Ideal for SPFx & Graph-authenticated apps

One doesn't exclude the other — they complement each other

You're NOT Building a RAG Pipeline

Traditional Approach

With the Chat API

Microsoft 365 Semantic Index automatically handles content grounding, relevance, and permissions—eliminating the need for custom embeddings or vector databases.

Permissions & Licensing

Automatic Permission Trimming

The API respects sensitivity labels, sharing settings, and all compliance controls your organization has configured.

No Extra Cost

Included in Microsoft 365 Copilot license. No Azure OpenAI tokens, no additional infrastructure, no separate billing.

Delegated Only

Only delegated permissions (work or school account) are supported. Application permissions are not supported.

Presented By: **Federico Porceddu**

Key Takeaways

- 1 The Copilot API brings M365 Copilot's power to YOUR custom applications
- 2 No RAG pipeline needed — Microsoft handles grounding, permissions, and compliance
- 3 Prompt engineering enables structured, predictable UI on top of AI capabilities
- 4 Included in Copilot license — no extra infrastructure or token costs
- 5 SPFx is a natural home for these capabilities in SharePoint

Microsoft 365 & Power Platform Community

Copilot Expands Across the Company: Microsoft 365 Rollout and GitHub Copilot Pilot for Developers

Ascanio Cialanotti

IT

Following the strong results and positive feedback from the GitHub Copilot pilot, we are pleased to announce that Microsoft Copilot for Microsoft 365 is being rolled out to the entire company. This marks an important milestone in our journey to leverage AI to simplify work, boost productivity, and enhance everyday collaboration across teams.

Microsoft Copilot for Microsoft 365: Now Available Company-Wide

Copilot is your AI assistant embedded in the Microsoft 365 tools you already use every day—such as Outlook, Teams, Word, Excel, and PowerPoint—helping you to:

- Draft, summarize, and refine content faster
- Analyze information and extract insights

Useful

HOW THIS RELATES TO YOU

What does this mean?

Directly Involved

You are a **Software Developer** included in the **GitHub Copilot pilot** and you actively engaged by **commenting on the announcement on April 16, 2026**.

Pending Actions

Items that may need your attention

LOW

Explore Microsoft 365 Copilot features and be ready to provide feedback when requested

TLDR

Key insights at a glance

- ✓ GitHub Copilot pilot: Open to all Software Developers – you are included
- ✓ Microsoft 365 Copilot: Now available company-wide – no activation action yet
- ✓ Next steps: Access details and training will be shared via internal channels
